

# EAGLE FERN EQUINE HOSPITAL

## NEW IN-HOUSE LABORATORY

Our In-House laboratory allows us to quickly perform diagnostic testing onsite. We are able to run complete blood counts (CBC), fibrinogen, chemistry panels, electrolytes, urinalysis, and others while you wait!

In addition to these automated tests, we perform many manual tests such as quantitative fecal flotation and fecal egg counts, cytology and IgG testing for foals.

Laboratory examination of stallion semen is also regularly carried out as part of fertility evaluations for stallions as well on samples used for artificial insemination.

Along with our extensive list of in-house diagnostic capabilities, we partner with many outside laboratories to offer many other tests such as histopathology, cultures and sensitivities, cytology, therapeutic drug monitoring, progesterone levels and Coggins testing.
